1. Overview of the final portfolio format
2. Description of how the portfolio demonstrates mastery of the course outcomes
3. Description of how the portfolio may be used into the future

I am still sticking with the portfolio being in website format on my website. I won't have to worry about losing this portfolio as if it was made in physical form because this will be posted online. It being linked within my personal website means easy access. I will demonstrate my mastery by having a paragraph description of each outcome. I apply my knowledge from this course by applying them to games and making comparisons to other topics that I am interested in, like AI. This portfolio can be used by anyone who wants an understanding of biology. If there is a time when I am having a conversation on the topic of biology, I could pull up this portfolio as a fact check for my knowledge, especially during this time with COVID vaccinations.
